CONSTRUCTION AND POTENTIAL OF THE ISCOM AS IMMUNOGEN (QUIL A, SAPONIN, VACCINE)

Author: LOVGREN, KARIN

The iscom--immunostimulating complex--is a highly immunogenic formulation of microbial membrane antigens. The adjuvant Quil A forms together with cholesterol a matrix into which amphipathic molecules are incorporated by hydrophobic...

EVALUATION OF GLYCOPROTEIN GII ISCOMS SUBUNIT VACCINE FOR PSEUDORABIES IN PIG

Author: TSUDA T (Reprint); SUGIMURA T; MURAKAMI Y

Author Address: EXOTIC DIS RES DIV, NATL INST ANIMAL HEALTH, KODAIRA, TOKYO 187, JPN\*\*JAPAN

Journal: Vaccine 9 ( 9 ): p 648-652 1991

ISSN: 0264-410X

Document Type: Article

Record Type: Abstract

Language: ENGLISH

Abstract: One of the pseudorabies virus glycoproteins, gII, was integrated into Quil A matrix and formed an antigenic presentation structure known as immunostimulating complexes (ISCOMS). The gII... ..was clearly discriminated from that of infected pigs by immunoprecipitation. The data indicated that the ISCOM technique was useful in PrV subunit vaccine preparation and demonstrated the importance of glycoprotein gII...

STUDIES ON THE PURIFICATION OF BOVINE LEUKEMIA VIRUS ENVELOPE GLYCOPROTEIN (GP51), ITS INTEGRITY AND IMMUNOGENICITY AFTER INCORPORATION INTO ISCOM

Author: MERZA, MALIK  
Degree: VET.MED.DR  
Year: 1991  
Corporate Source/Institution: SVERIGES LANTBRUKSUNIVERSITET (SWEDEN) ( 0697 )  
Source: Volume 5204C of Dissertations Abstracts International.  
PAGE 552 , 39 PAGES  
ISBN: 91-576-4422-5  
Publisher: SVERIGES LANTBRUKSUNIVERSITET, S-750 07 UPPSALA, SWEDEN  
...PURIFICATION OF BOVINE LEUKEMIA VIRUS ENVELOPE GLYCOPROTEIN (GP51), ITS INTEGRITY AND IMMUNOGENICITY AFTER INCORPORATION INTO ISCOM

...it lacks its transmembranous part gp30 which results in a low immunogenic monomeric antigen preparation. ISCOM is composed of a matrix, built up by triterpenoids of Quil A and lipids to which antigens are attached by hydrophobic interaction. To facilitate incorporation of gp51 into iscom, a procedure was developed first to expose hidden hydrophobic sequences in the molecule by an acid pH (2.4) and subsequently to integrate it into iscom.

The protective capacity and value of gp51 is dependent on epitopes which are involved in... ..ELISA discriminating the immune response generated by infection from that induced by the experimental gp51-iscom vaccine. Another method of discrimination, was the use of polymerase chain reaction (PCR) and hybridization...

Text:

...administered in a few doses early in life (1). These objectives are now more firmly integrated in vaccine research and development, fueled by advances in the fields of recombinant DNA technology...

...These structures are generated by mixing antigen with a biocompatible detergent and the complex adjuvant Quil A. The ISCOM self-assembles into stable 35-nm cage-like structures held together by the hydrophobic interactions between the matrix (Quil A), added lipids, and the antigen. ISCOMs containing viral membrane proteins have been tested in...

...during viral infection or after immunization with live attenuated vaccines. Concerns about the safety of Quil A must be resolved before ISCOMs can be administered to humans.

Protein cochleates, which are...

...lipid bilayer maintained by calcium bridges. Membrane proteins or peptides with lipid anchors can be integrated into this lipid bilayer, which protects them from intestinal acid and allows them to be... animal models these vaccines appear to stimulate persistent humoral and cell-mediated immune responses, without integration of plasmid into chromosomal DNA (27). The animals are protected from lethal virus challenge. This...

...AIDS, and will undoubtedly continue to receive intense scrutiny. Hypothetical safety concerns, including the potential integration of plasmid DNA into the host genome or the generation of anti-DNA antibodies, will...
